REDCCTV

RED Site Control

Smart control for your site security — all from one app

RED CCTV Site Control is a powerful, easy-to-use app designed to give you complete control over your site's security from your phone or tablet. Acting as a modern alternative to keypads, fobs, and shared access codes, Site Control provides a smarter, more secure way to manage who can access your site and when.

The app allows you to control and monitor key site systems including CCTV, gates, lighting, and other connected security assets — anytime, anywhere. With live system status at your fingertips, you can instantly check whether your site is armed or disarmed, view CCTV activity, and see exactly who has accessed the site, all in real time.

When connected to RED CCTV's monitoring services, Site Control becomes a central command hub for your security operations. User permissions can be managed instantly, access can be granted or revoked remotely, and every action is logged for full transparency and accountability. No more shared PINs or lost fobs — just clear, secure, auditable access control.

RED CCTV Site Control also functions as a guard patrol monitoring system, enabling security teams to log patrols, verify site visits, and create a clear audit trail of activity across one or multiple sites. Patrol events are time-stamped and recorded within the app, giving site managers confidence that checks are being completed correctly and on schedule.

Simple, secure, and fully connected, **RED CCTV Site Control** puts total site security control in the palm of your hand.

REDCCTV
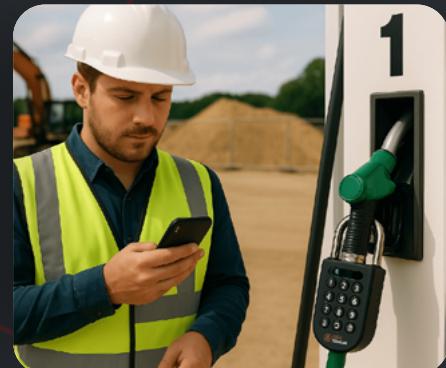

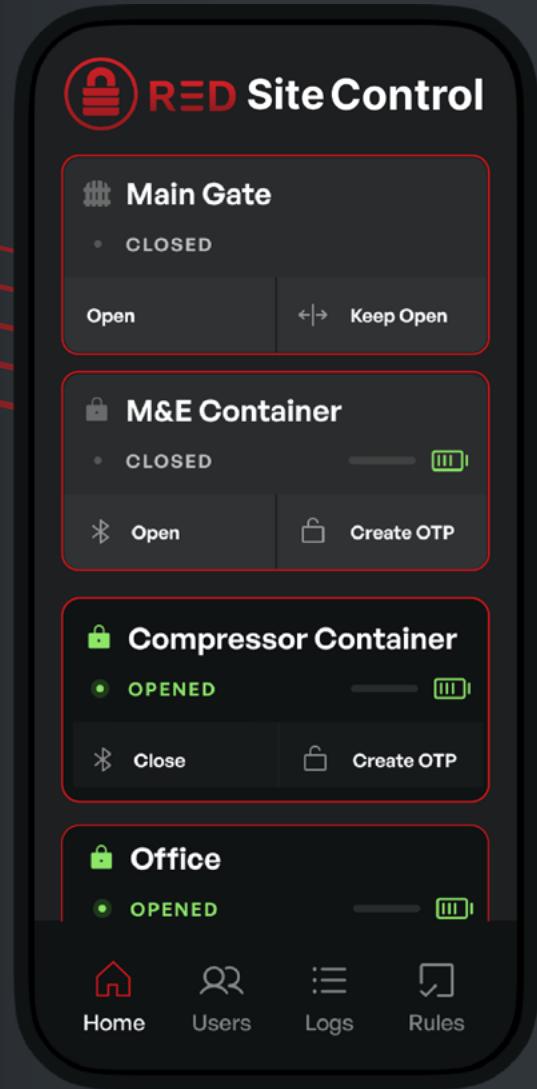

RED Site Control

Guards patrol multiple sites, with every patrol tracked and audited in the Site Control App.

Guards are visually captured on CCTV during patrols, enabling visual audit and verification.
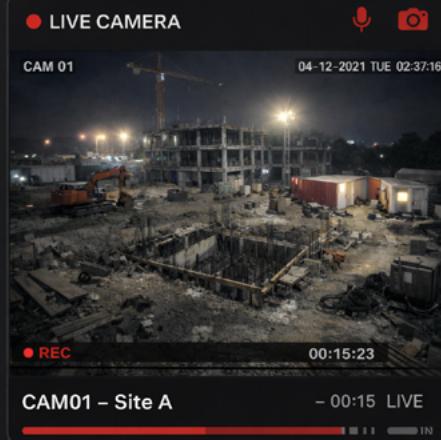

RED SiteControl allowing you to view all your CCTV cameras from within the same app, checking any alerts instantly.
