

## RED SiteLok

**Better gate control with the world's only Bluetooth smart padlock with an integrated keypad**

### OPEN WITH THE APP

Once in proximity of the lock, a simple button push on the app will bring the padlock to life. The LED lights on the padlock will briefly flash and the lock will beep, giving you a 30 second window to open the lock.

### OPEN WITH THE KEYPAD

Unlike a normal combination padlock with one pin, now you can generate 100s of passcodes. Employees can have their own personalised pins, while contractors can be given timed expiry pins. And you give once off access too with an OTP. The app records who created the passcode, for who and when it was used.

### TAMPERED & PICK PROOF

Chrome plated shackle for rust resistance. Lock shackle withstanding 15kN cutting force, 5kN pulling force and 100Nm twisting force. Satin powder coating lock body for corrosion resistance. Electromagnetic protection with AES-128 bit encryption.

### WATERPROOF AND ROBUST

With an IPX8 and CEN 3 rating means the padlock is insurance rated. With a boron steel shaft, the padlock is resistant to twisting, cutting and impacts.

### RECHARGEABLE, LONG-LIFE BATTERY

With a battery life of up to 12 months, the battery can be recharged via USB-C in under 1 hour. You can see how much battery is left within the app.

### SMART PADLOCKS

Better gate control with the world's only Bluetooth smart padlock with an integrated keypad. In conjunction with world smart access control leader, Igloo Co & Knowio, we bring you the Red SiteLok. With a combination of Bluetooth technology combined with Igloo's patented OTP technology, the padlock can be opened either directly via the Red Site Control app, or via a one off access key code, created from within the app.
